

2021-2022 AP CHEMISTRY SUMMER WORK

Students entering MPCS AP Chemistry in the fall are expected to receive a review packet and have it ready to turn in during the first week of school. This packet includes a review of most concepts learned in first-year Chemistry that carry over into AP Chemistry. Topics include significant digits, conversion factors, writing formulas, balancing equations, solution concentrations, and VSEPR drawings. There will be two new topics that students will be introduced to through the packet: gas laws and redox reactions. The end of the packet has 70 problems that must be completed and turned in by the second class period of the fall semester. Please see or email Mrs. Hamilton (shamilton@mtparanschool.com) to pick up your summer review packet.
